

# ***Need for Speed***

2010 ISMRM Meeting: Data Reconstruction Challenge

**Trajectory:** Bent Bow-Tie

**Designer:** Alexey Samsonov

**Description:** PR-like trajectory consisting of 4 half echoes designed to satisfy the following properties:

- 1) Maximized k-space coverage per time frame.
- 2) Partial Fourier sampling (bent projections)
- 3) Bit reversed order.

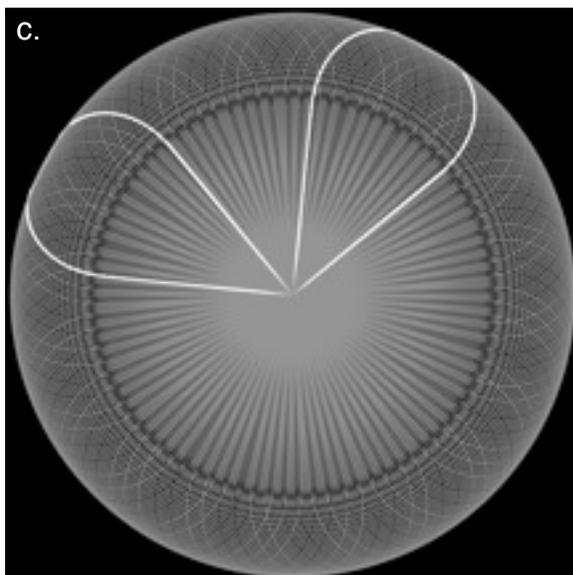

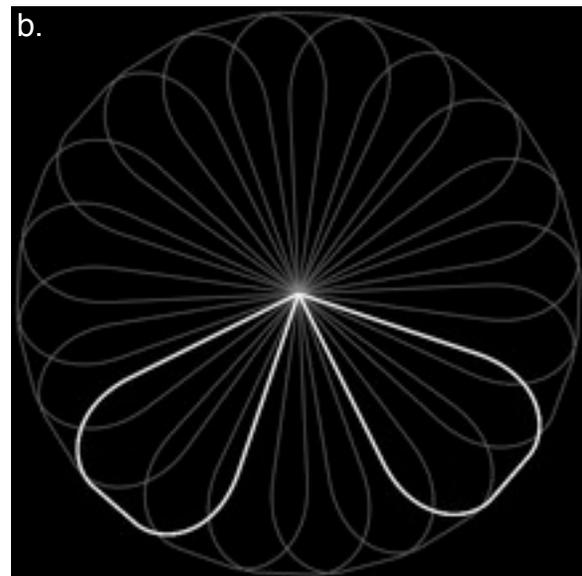

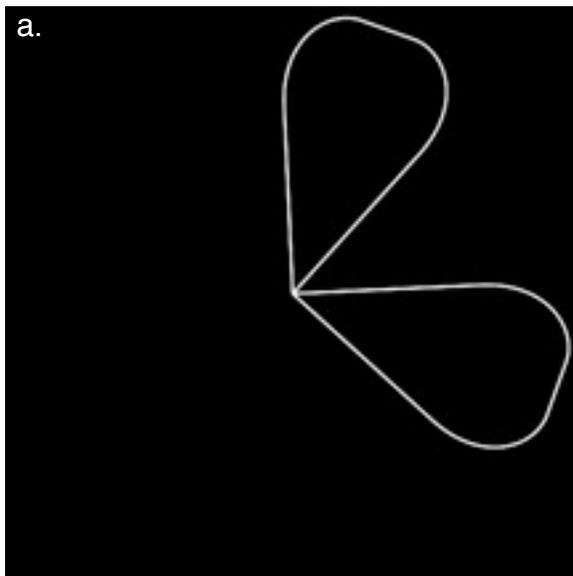

Figure 1: Trajectory at successive temporal stages. The grayed trajectories are areas that past TRs have covered in the sequence. (a) 1st TR. (b) 10th TR (c) 200th TR.
